

# SMARTXIDE DOT

## Advanced CO2 Fractional Technology

### Skin Resurfacing Fractionated

### Skin Resurfacing Traditional

## FRACTIONAL AND SKIN RESURFACING

With SmartXide DOT physicians can select treatment parameters ranging from fractional, superficial and delicate treatments (minimum density 1.7%) to increasingly deeper treatments such as skin resurfacing (density 100%). Physicians can now offer the most appropriate treatment based on each patients' need.

Fractional treatments offer rapid recovery times with minimal post-op care.

Full resurfacing treatments can be performed in a single session, but require longer post-op care

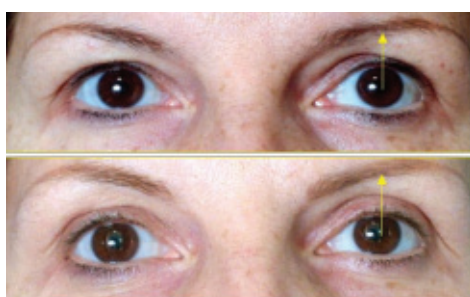

The thermal control of the emissions offered by the SmartPulse technology reduces recovery time even in skin resurfacing treatments.
